Managed WiFi

Deliver Secure WiFi, for Employees and Guests

Support the Influx of Wireless Devices

Connecting the growing number of wireless devices can be a challenge. With Fusion Connect Managed WiFi, you can expand your network to support the inscreasing number of customer and employees wireless devices, affordably.

Fusion Connect Managed WiFi Overview

Fusion Connect Managed WiFi Includes:

Network Design & Maintenance.

Fusion Connect's knowledgeable staff will design, monitor, configure, and troubleshoot your WiFi network to keep you up and running

24/7 Monitoring & Management.

Once the Access Points are installed and connected, Fusion Connect manages it for you. We can establish usage controls that support your business needs. For example, giving real-time traffic like voice calls higher priority across your network

Help Desk Support 24/7/365

Network Updates.

Firmware and software updates happen seamlessly online. The latest upgrades and features are automatically delivered to your Access Points and your management dashboard

Reporting.

Summary reports delivered in your management dashboard provide insight into your network, so you can better understand traffic, clients, and application usage

Lifetime Warranty on APs

Access Points (APs)

Speed

APs feature enterprise-class 802.11ax technologies, supporting more than 100 users each.

Performance

Fusion Connect APs have high-power radios, enhanced receive sensitivity, multiple antennas, and advanced signal processing. Integrated optimization with real-time spectrum analysis enables high-performance wireless in dense, demanding environments.

Security

Built-in security segments wireless users, applications, and devices. Your network is secured from attacks by automatically enforcing the right access policies by device or user type.

Versatility

APs support both private traffic (via secure LAN) for employees, contractors, and business partners, as well as public WiFi users.

Fusion Connect Managed WiFi Includes:

Brand Support.

Customize the WiFi welcome page, and offer Facebook “Check-In” to promote your brand

Analytics/Customer Data.

Gather important usage and presence data to target your offers. Gain visibility into your network users, devices, and applications

Freedom of Movement.

Employees can move about your business, serving customers where they are using WiFi-enabled devices

Lower Costs.

Eliminate capital expenditures on equipment, training, technology upgrades and dedicated resources
