

## Product Sheet

# Wireless Broadband

## Secure LTE, 4G, and 5G Access - Speeds from 5 Mbps to 100 Mbps+

### Secure Access at Broadband Speeds

Wireless Broadband delivers high-speed Internet service through a wireless wide area network (Wireless WAN). The fully managed and secure service requires minimal equipment and wiring. Fusion Connect provides all the necessary equipment with your Wireless Broadband service. This solution can also be combined with our Managed WiFi solution.

### Also Available with a Multi-carrier eSIM.

Experience seamless connectivity with a multi-carrier eSIM Wireless Broadband solution, which automatically connects to the strongest carrier network available at any given time. Enjoy continuous connectivity at an affordable price point.

### Remote & Redundant Access

Wireless Broadband doesn't use the same last-mile local loop facilities as terrestrial broadband access services do. This way it can provide complete redundancy.

It's also perfect for branch offices, retail stores or restaurants, or locations that do not have access to dedicated fiber or cable. Wireless Broadband gives your employees access to the Internet and your corporate VPN at broadband speeds.

### Quick Connectivity

Use Fusion Connect Wireless Broadband as a temporary access method while you wait for your circuit to be delivered.

It takes a fraction of the time to configure and install compared to traditional wireline connections. This makes it easy to setup and use at single short-term events, like conferences or festivals, where other internet access options don't make sense.

### Why Choose Wireless Broadband?

---

Only minimal equipment and wiring is required.

It allows for 100% coverage of locations.

Supplies affordable backup to existing primary wireline services.

Supports multiple users per site.

Coverage can include LTE, 4G, and 5G.

Available in a multi-carrier eSIM configuration.

Affordable pricing plans depending on your business needs: pooled, non-pooled, and failover plans.

## Managed Failover Solutions

Subscribe to Fusion Connect Wireless Managed Failover Service and increase the availability service level agreement (SLA) for your Fusion Connect primary connectivity solution.

Fusion Connect deploys all the necessary equipment and sets up the service, then manages and monitors the network to ensure it's working for you.
